Professional Summary

Full-Stack Engineer (Backend-Focused) with 7+ years building scalable APIs, microservices, and distributed systems across enterprise domains. Proficient in Node.js, Python, and React.js with hands-on experience delivering reliable, high-performance backend systems and secure REST APIs (OAuth 2.0) in fast-paced agile environments, leveraging AI-assisted development tools to accelerate delivery.

Technical Skills

Languages: JavaScript, TypeScript, Python, SQL

Backend: Node.js, Express.js, Nest.js, FastAPI, Django, Flask, RESTful APIs, OAuth 2.0, API Security, WebSockets, Microservices, gRPC

Frontend: React.js, Next.js, Redux, Tailwind CSS, Material-UI, ShadCN, Storybook

Databases: PostgreSQL, MongoDB, MySQL, Redis, DynamoDB, Cassandra, SQLite; complex query optimization, stored procedures

Cloud: AWS (Lambda, EC2, ECS, RDS, S3, SQS, SNS, EventBridge, CloudWatch, Cognito, SES, Secrets Manager, Parameter Store, IAM), GCP (Firebase, Firestore, FCM)

DevOps & Observability: Docker, Kubernetes, Nginx, GitLab CI/CD, Git, PM2, Grafana, Loki, Prometheus, Jest, Swagger, Postman

AI Tools: GitHub Copilot, Claude, ChatGPT — AI-assisted development, code review, and test generation

Professional Experience

Senior Software Engineer June 2022 – Present

Green Story (Simplizero Sustainable Solutions Pvt Ltd) *Remote, India*

- Architected production microservices in Node.js, Nest.js, and TypeScript serving enterprise clients with consistent uptime and sub-100ms API response times.
- Engineered a fault-tolerant order processing pipeline with strict ACID compliance, retryable job execution via Bull queue and Redis, and idempotent API design to ensure consistency under partial failures.
- Integrated WhatsApp Business API enabling end-users to interact with the platform over WhatsApp, covering message routing, webhook handling, and multi-number credential management per phone number ID.
- Built a server-side template engine for instant PDF generation from dynamic HTML templates, supporting automated compliance reports, analytics reporting, and client-facing documents at scale.
- Developed optimized complex SQL queries, stored procedures, and data-processing logic in PostgreSQL for reporting and analytics workloads, significantly reducing query times on high-volume reporting endpoints.
- Designed a structured logging system for background processors capturing job lifecycle events, failures, and retries with correlation IDs for full traceability across async workflows.
- Implemented batch message processing pipeline for high-volume notification delivery via AWS SQS and SES, with rate limiting, dead-letter queues, and retry strategies.
- Managed database migrations across PostgreSQL and MongoDB within CI/CD pipelines using zero-downtime strategies and rollback scripts for safe production deployments.
- Designed event-driven architecture using AWS Lambda, SQS, SNS, and EventBridge; secured APIs with OAuth 2.0 authentication and authorization via Cognito, JWT, and RBAC; managed secrets via AWS Secrets Manager and Parameter Store.
- Set up observability stack with Grafana, Loki, and CloudWatch; established GitLab CI/CD with Docker and ECS with automated rollbacks, reducing incident detection time from hours to minutes; independently root-caused and resolved complex production issues across distributed services and data pipelines.
- Adopted AI tools (GitHub Copilot, Claude, ChatGPT) for code generation, review, and test scaffolding, accelerating feature delivery in an agile, sprint-based workflow while maintaining code quality.
- Designed and enforced API versioning strategy and internal developer guidelines across microservices, reducing integration errors and onboarding time for new engineers joining the platform team.

Senior Process Associate March 2019 – June 2022
Tata Consultancy Services *Gandhinagar, Gujarat, India*

- Built backend services in Node.js and Python (FastAPI, Django, Flask) for BFSI and e-commerce clients in agile scrum teams, covering payment APIs, product catalogue services, and order management systems.
- Designed and optimized schemas across PostgreSQL, MySQL, MongoDB, and SQLite; built async job pipelines with Bull queue and Redis for notifications, report generation, and background tasks.
- Built React.js and Next.js frontends with Redux for state management, reusable component libraries documented in Storybook, functional components with custom hooks, and pure utility functions following React best practices.
- Developed responsive UI layouts using Tailwind CSS and Material-UI; implemented lazy loading, code splitting, and Web Workers for performance optimization across banking portals and e-commerce storefronts.
- Integrated real-time features using Firebase Firestore (Google Cloud Platform) for live data sync and FCM for push notifications across web applications.
- Received Service and Commitment Award (2022) and On-The-Spot Team Award (2019) for consistent delivery and technical contributions.

Education

Bachelor of Technology – Electrical and Electronics Engineering Graduated: 2018
Vaageswari College of Engineering *Karimnagar, Telangana*

Diploma in Polytechnic 2012 – 2015
Jyothishmathi Institute of Technology and Science *Karimnagar, Telangana*

Secondary School Certificate Graduated: 2012
Loyola High School *Karimnagar, Telangana*
